

HPAP Final Presentation – Slide-by-Slide Plan (FINAL)

Slide 1 – Title Slide

Title: Hocking College Phishing Awareness Program (HPAP)

Content:

Team name

Course

Date

Speaker: Alex

Say:

“Good afternoon, and thank you for attending. We are the NET-2650 capstone team presenting the Hocking Phishing Awareness Program.”

Put at the bottom of title- Created by Network Systems Security Class of 2026 (Done)

Slide 2 – Purpose

Title: Purpose

Content:

Increase phishing awareness across campus

Reduce successful phishing attacks

Teach users how to recognize and respond

Build long-term cybersecurity habits

Speaker: Cameron

Say:

“The goal of this program is to improve phishing awareness across the entire campus. We focus on reducing successful attacks, teaching users how to respond, and building long-term cybersecurity habits.”

Slide 3 – Why This Matters

Title: Why This Matters

Content:

One Click Can Impact the Entire College

Data Exposure

Financial Fraud

Institutional Damage

Account Compromise

Speaker: Christian

Say:

“Phishing is not just a minor issue—it can impact the entire college. A single click can lead to data exposure, financial fraud, and compromised accounts across campus systems.”

Slide 4 – Common Phishing Methods

Title: Common Phishing Methods

Content:

Email phishing (IT, Financial Aid, Professors)

Smishing (Text messages)

QR phishing

Credential harvesting (Fake login pages)

Speaker: Christian

Say:

“Phishing attacks come in multiple forms. Attackers use email, text messages, QR codes, and fake login pages to trick users into giving up information.”

Slide 5 – Human Factors

Title: Why Phishing Works

Content:

Urgency

Authority

Curiosity
Fear

Speaker: Cayden

Say:

“Phishing works because it targets human behavior. Attackers use urgency, authority, curiosity, and fear to pressure users into making quick decisions.”

Slide 6 – Our Solution

Title: Our Solution: HPAP

Content:

Campus-wide
Repeatable
Simple

Speaker: Cayden

Say:

“To address this problem, we developed the Hocking Phishing Awareness Program. It is designed to be simple, repeatable, and scalable across campus.”

Slide 7 – The 3 Pillars

Title: The 3 Pillars

Content:

Training
Awareness
Detection

A complete approach to reducing phishing risk across campus

Speaker: Thomas

Say:

“Our program is built around three core pillars: training, awareness, and detection. Together, these create a complete approach to reducing phishing risk across campus.”

PILLAR 1 – TRAINING

Slide 8 – Training Users

Title: Training Users

Content:

Integrated into Pathways to Prosperity

Real-world examples

How to spot phishing

End-of-module test

Speaker: Brylan

Say:

“Training is where behavior change starts. This module is integrated into Pathways to Prosperity and focuses on real-world phishing scenarios and user behavior.”

Add an extra slide explaining quizzes and module slides.

Slide 9 – Real-World Scenarios

Title: Real-World Scenarios

Content:

Blackboard alerts

Financial aid messages

Account security warnings

Speaker: Christopher

Say:

“Users are trained using realistic scenarios they actually experience, which makes the training practical instead of theoretical.”

Examples instead of logos.

PILLAR 2 – AWARENESS

Slide 10 – Reinforcing Awareness

Title: Reinforcing Awareness

Content:

Posters across campus
Flyers & trifold at events
Email tips and reminders
Repetition builds habits

Speaker: Clay

Say:

“Training alone is not enough. We reinforce it through repeated messaging across campus to help build long-term habits.”

Stress that Cybersecurity Class will make new ones each year.

Slide 11 – AI Chatbot

Title: PhishGuard AI

Content:

Instant phishing check
Simple user guidance
Supports decision-making

This gives users immediate support instead of guessing

Speaker: Alex

Say:

“We also use AI to support users in real time. PhishGuard AI allows users to quickly check if a message is suspicious, giving them immediate support instead of guessing.”

Add video of running the code and its workability. Add another slide for video.

Slide 12 – Reporting

Title: Reporting Suspicious Messages

Content:

Do not click
Verify the sender
Report to IT
Delete the message

Speaker: Don

Say:

“When a user encounters a suspicious message, their response is critical. The most important step is to report it to IT so it can be reviewed and prevented.”

PILLAR 3 – DETECTION & TESTING

Slide 13 – Phishing Simulation

Title: Phishing Simulation

Content:

Controlled phishing scenarios
Blackboard-style email test
Ethical and transparent

Speaker: Don

Say:

“We simulate real phishing scenarios to test user behavior. This allows us to measure awareness in a controlled and ethical way.”

Add phishing scenario to this slide

Slide 14 – QR Code Test

Title: QR Code Simulation

Content:

Measures:

- Scan rate
- User behavior
- User awareness

Simulates real phishing tactics

Speaker: Alex

Say:

“QR phishing is a growing attack method. This test allows us to measure how users interact with unknown QR codes in a safe environment.”

Fake some numbers

Slide 15 – Phishing Detection Tool

Title: Phishing Detection Tool

Content:

Analyzes reported emails

Detects:

- suspicious keywords
- spoofed domains
- malicious links

Outputs risk score

Helps IT identify high-risk phishing threats faster

Speaker: Clay

Say:

“My contribution focuses on the detection side of phishing. This tool analyzes reported emails and assigns a risk score based on measurable indicators like spoofed domains and suspicious links. This helps IT quickly identify high-risk threats and respond faster.”

Add video of running the code and its workability. Add another slide for video.

Slide 16 – Measuring Success

Title: Measuring Success

Content:

Click rate ↓

Report rate ↑

Awareness ↑
Risk ↓

Tracks real user behavior and program effectiveness

Speaker: Thomas

Say:

“We measure success based on user behavior. Our goal is to reduce risky actions and increase reporting across campus.”

Change speaker notes in order to measure our success, our deliverable is to.....

CLOSING

Slide 17 – Conclusion

Title: Conclusion

Content:

Training + Awareness + Detection = Stronger Security

Speaker: Christian

Say:

“Phishing is both a technical and human problem. By combining training, awareness, and detection, we build long-term security habits across campus.”

Make it prettier

Slide 18 – Questions

Title: Questions

Content:

Thank you for attending this presentation

Speaker: Christian

Say:

“Thank you for your time. We would be happy to answer any questions.”
