

Draft Accessibility Report & Executive Summary (Graded)

Week 6 – Client-Ready Draft

 **Important:** This is a *draft* version of a professional report intended for review and revision prior to final client delivery in Week 7.

Project Information (Not Graded)

Course: CYBR-2600 Cyber Security & Network Practicum

Client: Village of Jacksonville, Ohio

Website Reviewed: jacksonvilleoh.com

Student Team Members:

- Cameron McKenzie

Instructor: Norma Depriest

Draft Submission Date: 04/24/2026

SECTION 1 — EXECUTIVE SUMMARY (35 POINTS)

Purpose of This Section

The Executive Summary is written for **non-technical leadership** (e.g., Village Administrator, Clerk, Council members). It should be understandable **without reading the rest of the report**.

Required Length

- ✓ 1–2 full pages
 - ✓ Complete sentences and paragraphs
 - ✓ No bullet dumping
-

Required Content (ALL must be present)

Your Executive Summary **must include**:

1. **Purpose of the Review**
 - Why the accessibility review was conducted
 - Why accessibility matters for public-sector websites
 2. **Regulatory Context (Plain Language)**
 - ADA Title II applies to local government websites
 - WCAG 2.1 Level AA is the applicable standard
 - Mention compliance timelines **without alarmist language**
 3. **Overall Accessibility Posture**
 - High-level statement of what was observed
 - Avoid “compliant / non-compliant” language
 4. **Top 3–5 Prioritized Accessibility Risks**
 - Describe each risk in plain language
 - Explain **who is affected** and **what is impacted**
 - Do not include technical jargon
 5. **Why These Issues Matter**
 - Civic participation
 - Access to services
 - Public information and transparency
-

What NOT to Include

- ⊘ WCAG success criterion numbers
- ⊘ Tool names or screenshots

- ⊘ Legal conclusions
 - ⊘ Fix instructions
-

Grading (35 pts)

Score	Description
35	Executive-level, clear, persuasive, client-appropriate
25	Mostly strong but slightly technical or unfocused
15	Reads like a class paper, not leadership communication
0	Missing or unusable

SECTION 1 - EXECUTIVE SUMMARY

This draft accessibility review looked at the public-facing website for the Village of Jacksonville, Ohio. The goal was to identify possible accessibility barriers that could make it harder for residents, visitors, and community members to access public information online. Local government websites are often used for meeting minutes, notices, directory information, service updates, and public records, so it is important that this information is usable for as many people as possible.

Accessibility matters because people do not all use websites the same way. Some users rely on screen readers, keyboard navigation, enlarged text, high contrast settings, or other assistive technology. Others may have low vision, color vision differences, cognitive-processing challenges, or difficulty using a mouse. When links, documents, or page layouts are not clear, these users may have a harder time finding or understanding public information.

In plain language, ADA Title II applies to local government services, including digital information and services. WCAG 2.1 Level AA is the standard being used for this project. Accessibility requirements also include compliance timelines, so identifying priority areas now can help the Village plan improvements in an organized and non-alarmist way. This draft does not make legal conclusions, certify compliance, or say whether the Village is fully compliant or non-compliant. Instead, it gives an advisory review of the accessibility risks observed during the project.

Overall, the website does provide useful public information, and some areas worked well during manual testing. Keyboard-only testing showed that the main homepage links and directory page

items could be reached and activated, and no obvious keyboard traps were found. At the same time, the review found several areas that may create barriers for some users, especially users who rely on screen readers, clear link descriptions, readable text, and simple page organization.

The main concerns involve linked images, unclear links, PDF structure, color contrast, screen-reader clarity, and page layout. Automated testing flagged linked images that may not have clear text alternatives, empty or unclear links, contrast warnings, and possible PDF structure concerns.

Manual testing also showed that some page areas, such as the homepage banner and the directory page layout, may require extra scanning before users can quickly find the information they need.

These issues matter because the Village website supports public communication, access to records, civic participation, and community services. If users run into barriers online, they may have more difficulty reviewing meeting information, locating services, or contacting the correct local office. This draft is meant to support review before the final client deliverable and does not include remediation steps yet.

SECTION 2 — PROJECT PURPOSE & SCOPE (15 POINTS)

Purpose of This Section

Explain **what was reviewed and what was not**, so leadership understands the boundaries of the assessment.

Required Content

- Purpose of the accessibility review
- In-scope content:
 - Public-facing website pages
 - Posted public documents (e.g., PDFs)
- Out-of-scope content:
 - Third-party platforms
 - Internal systems
 - Remediation activities

- Statement that the review is **advisory**, not a certification
-

Grading (15 pts)

Score	Description
15	Clear, professional, and complete
10	Mostly complete with minor gaps
5	Vague or overly technical
0	Missing

SECTION 2 - PROJECT PURPOSE & SCOPE

The purpose of this review is to evaluate selected public-facing areas of the Village of Jacksonville, Ohio website and identify accessibility risks that may affect access to public information. The review focused on navigation, link clarity, document access, readability, and general usability for people with accessibility needs.

The following content was in scope:

- Public-facing pages on jacksonvilleoh.com
- Homepage and primary navigation areas
- Public information pages, including meeting minutes and utility-related content
- Directory/contact-related information
- Posted public documents, including a council meeting minutes PDF

The following areas were out of scope:

- Third-party platforms or external websites
- Internal systems or administrative interfaces
- Backend website systems
- Direct remediation or implementation of fixes
- Legal certification or formal compliance determination
- Direct client contact outside instructor-approved communication

This review is advisory and is meant to help identify areas where accessibility may need further attention.

SECTION 3 — METHODOLOGY SUMMARY (15 POINTS)

Purpose of This Section

Demonstrate that the findings are **credible and defensible**, without overwhelming the reader.

Required Content

- Overview of:
 - Automated accessibility testing
 - Manual and assistive technology validation
- Explanation of **why both methods were used**
- Reference to representative page sampling

 Write this section so a reader trusts the process — not the tools.

Grading (15 pts)

Score	Description
15	Clear, accurate, confidence-building
10	Adequate but under-explained
5	Tool-centric or confusing

0	Missing
---	---------

SECTION 3 - METHODOLOGY SUMMARY

The review used both automated accessibility testing and manual validation. Automated testing was used first to identify common issues such as missing alternative text, contrast warnings, empty links, and possible document structure concerns.

Automated testing is helpful, but it cannot fully determine whether a website is accessible. It cannot always tell whether a link makes sense to a real user, whether page navigation feels clear, or whether content is easy to understand in context.

Manual testing was used to better understand how the findings may affect users. This included keyboard-only testing with Tab, Shift+Tab, and Enter. Limited Narrator observation was also used on the homepage and Directory page to check how some page titles, headings, and links were announced.

The review looked at a representative sample of content, including the homepage, Meeting Minutes page, utilities-related page, Directory page, and one posted council minutes PDF.

Using both automated and manual methods helped identify likely issues and connect them to real user impact.

SECTION 4 — PRIORITIZED ACCESSIBILITY FINDINGS (25 POINTS)

Purpose of This Section

Translate technical findings into **decision-ready information**.

Required Structure (REPEAT for each issue)

You must include **6–10 prioritized issues**, each with:

- **Issue Summary (Plain Language)**

- **Priority Level** (High / Medium / Low)
- **Affected Users**
- **Task or Content Impacted**
- **Why This Matters in a Public-Sector Context**

 Do not recommend fixes yet.

Grading (25 pts)

Score	Description
25	Clear prioritization, strong impact framing
18	Good content, weak explanations
10	Reads like a findings list, not analysis
0	Missing

SECTION 4 - PRIORITIZED ACCESSIBILITY FINDINGS

Finding 1: Linked Images May Not Be Clearly Identified

Priority Level: High

Issue Summary:

Linked images on the homepage and utilities-related page were flagged because they may not provide clear text alternatives. The homepage could be navigated with a keyboard, but limited screen-reader observation found that some link information was not always clearly announced.

Affected Users:

Screen-reader users and users who rely on non-visual navigation.

Task or Content Impacted:

Understanding homepage links, utilities-related links, image-based navigation, and shortcut areas.

Why This Matters in a Public-Sector Context:

Residents may use these links to find public information or services. If linked images are not clearly identified, some users may not know what information they are selecting.

Finding 2: Directory Links and Screen-Reader Clarity May Be Unclear

Priority Level: High

Issue Summary:

The Directory page had automated findings related to empty or unclear links. Manual testing showed that the page could be used with a keyboard, but limited screen-reader observation found that link information was not consistently clear.

Affected Users:

Screen-reader users, keyboard-only users, and users who need clear link descriptions.

Task or Content Impacted:

Finding directory listings, local contacts, and public service information.

Why This Matters in a Public-Sector Context:

The Directory page helps residents find important local contact information. If links are unclear, users may have a harder time identifying the correct office, listing, or resource.

Finding 3: Public PDF Document May Need Stronger Accessibility Structure

Priority Level: High

Issue Summary:

The reviewed council minutes PDF opened normally and appeared readable during a basic visual review. However, automated testing flagged possible concerns with the document title, language information, and structure. A full screen-reader review of the PDF was not completed.

Affected Users:

Screen-reader users, users with low vision, and users who rely on structured document navigation.

Task or Content Impacted:

Reading council minutes and reviewing official public documents.

Why This Matters in a Public-Sector Context:

Public documents support transparency and civic participation. If PDFs are not structured accessibly, some residents may have difficulty reviewing official information.

Finding 4: Color Contrast May Affect Readability

Priority Level: Medium

Issue Summary:

Automated testing identified contrast warnings on public information pages, including the Meeting Minutes page and related navigation/content areas. Low contrast can make text harder to read.

Affected Users:

Users with low vision, color vision differences, older adults, and users viewing the site on smaller or dim screens.

Task or Content Impacted:

Reading meeting minutes, public notices, navigation labels, and other posted information.

Why This Matters in a Public-Sector Context:

Public information should be easy to read. If text is difficult to see, residents may have a harder time accessing government updates and meeting-related information.

Finding 5: Page Layout May Make Key Content Harder to Find

Priority Level: Medium

Issue Summary:

Manual review found that the homepage's large hero/banner area created a visually cluttered first impression. The Directory page also placed strong visual emphasis on the map and upper layout before the directory listings became the main focus.

Affected Users:

Users with low vision, attention difficulties, cognitive-processing challenges, or users who benefit from simple page organization.

Task or Content Impacted:

Finding public notices, meeting minutes, directory listings, contact information, and homepage shortcuts.

Why This Matters in a Public-Sector Context:

Residents may visit the site to quickly find public information. A visually busy layout can make that process slower and less clear.

Finding 6: Accessibility Issues Appear Across Multiple Content Types

Priority Level: Low

Issue Summary:

The review found accessibility concerns across web pages, linked images, navigation elements, layout areas, and a PDF document. This suggests that accessibility should be treated as an ongoing website and content management issue.

Affected Users:

Screen-reader users, keyboard users, low-vision users, users with cognitive disabilities, and users accessing the site on different devices.

Task or Content Impacted:

General website navigation, public document access, public information review, and understanding available services.

Why This Matters in a Public-Sector Context:

Local government websites change over time as new notices, minutes, documents, and updates are posted. Accessibility should continue to be considered as the website is updated.

SECTION 5 — LIMITATIONS & CONTEXT (5 POINTS)

Purpose of This Section

Demonstrate professional judgment and transparency.

Required Content

- Sampling limitations
 - Tool limitations
 - Time or scope constraints
 - Statement that accessibility is **ongoing**, not one-time
-

Grading (5 pts)

Score	Description
5	Honest and professional
3	Generic
0	Missing

SECTION 5 - LIMITATIONS & CONTEXT

This review was limited by time, scope, and course requirements. The team reviewed a representative sample of pages and one public PDF document rather than every page, document, or user path on the website. Testing was also limited to one device and browser

environment. Manual testing included keyboard-only navigation and limited Narrator observation, but it did not include a full screen-reader review of every page or document. Automated testing also has limits. Tools can identify likely issues such as missing alternative text, contrast warnings, empty links, and document structure concerns, but they cannot fully judge usability or user experience. This review did not include remediation work, direct website changes, backend review, legal certification, or direct client contact outside the course process. Accessibility should be treated as an ongoing responsibility as new pages, notices, meeting minutes, and documents are added.

SECTION 6 — PROFESSIONAL QUALITY & READINESS (5 POINTS)

Assessed Holistically

- Tone appropriate for a government audience
 - Logical flow and headings
 - Grammar and clarity
 - Consistency across sections
-

Grading (5 pts)

Score	Description
5	Near client-ready
3	Needs editing
0	Unprofessional

SECTION 6 - TRANSITION TO NEXT STEPS

The next step is to review these draft findings and confirm that the priority levels accurately reflect user impact and public-sector importance. The team should also make sure each finding is supported by the evidence already collected through automated testing, keyboard testing, limited screen-reader observation, and manual review.

Before the final report is submitted, the team should refine the wording, confirm the evidence for each finding, and prepare the final client deliverable in a professional format. The final deliverable should focus on the most important accessibility risks, explain why they matter, and present the information in a way that is useful for non-technical leadership.

TOTAL POINTS: 100
