

Title: NET-2650 – Professional Ethics & Scope Acknowledgment

Brylan Williamson

3-17-26

1) Authorized Scope

My work in this capstone is limited to the authorized lab environments provided for this course, including Windows and Linux systems used for training. I am allowed to perform security tasks such as analysis, monitoring, and testing only within these controlled environments. I will not interact with or scan any real world production systems, networks, or external organizations. Any activity outside the defined lab scope is not permitted. I understand that all work must follow the boundaries set by the instructor and course guidelines.

2) Ethical Responsibilities

Following scope and ethical guidelines is essential in cybersecurity. Unauthorized actions can cause harm, violate privacy, and lead to serious legal or academic consequences. As a student, I am responsible for acting with integrity, respecting system boundaries, and protecting any information I encounter. Ethical behavior is important in building trust and reflects what is expected in real cybersecurity roles. I understand that staying within scope is part of my professional responsibility.

3) Professional Conduct & Evidence

I will document all of my work clearly and professionally. This includes keeping organized notes, recording timestamps, and saving evidence such as logs or screenshots when needed. My documentation will be accurate, easy to understand, and properly structured so others can review my work. I will make sure all evidence supports my findings and is labeled correctly. Clear documentation is important for communication, accountability, and real-world cybersecurity work.

4) AI Use Statement

I may use AI tools to help me understand concepts, improve writing, or organize ideas. However, I will not rely on AI to complete my work without understanding it. I will review, edit, and verify any AI generated content to make sure it is accurate and appropriate. I will also compare information with course materials or trusted sources when needed. If I use AI, I will record it in the AI usage log and remain responsible for all submitted work.

I used ChatGPT to help draft and organize this paper to make it more professional. I reviewed and edited the content to make sure it matches the assignment requirements and my understanding of the course. I checked that the information was accurate and aligned with the instructions provided. I understand that AI can sometimes give general or incorrect information, so I made sure the final submission reflects my own work and understanding.
