Dear Hocking College Faculty, Staff, and Students,

We are writing to express our intent to create a cybersecurity phishing campaign as part of our capstone project for the Cybersecurity and Networking program. The purpose of this project is to raise awareness about the ongoing phishing attacks happening at Hocking College and help reduce the success of socially-engineered attacks.

This includes training set to help rectify current issues, and remain in an ongoing manner to reduce future occurrences. Some methods and approaches we plan to use are:

- Digital Training programs at the start of Fall and Spring semester. Completion will be mandatory to access online services such as BlackBoard, ensuring training compliance.
- Remediation training for those that fell for phishing attacks
- Working with the Honor Society to provide technical assistance for their anti-phishing tri-fold pamphlets, flyers, and posters.
- In-person education opportunities for faculty, staff, and students at Hocking College.
- Cyber-Awareness additions to the school web-page.
- A process that is repeatable for other surrounding schools facing the same hardships.

All activities performed for this project will be done transparently, ethically, and within the approved scope. This project will not collect or target any personal information and any metrics that are collected will be used strictly for educational purposes and anonymized. The campaign will only run in controlled simulations and in approved environments. All activities will be evaluated and supervised by the cybersecurity program advisor, Professor **Norma Depriest**.

Our team hopes to create a stronger awareness of cybersecurity at Hocking College to protect the individuals and networks being used. We will do this by applying the practical skills we have obtained throughout our time in the Cybersecurity and Networking program. By the end of year 1, we would like to see a decrease in email compromise by 50% and have all faculty and students baseline understanding of how to spot phishing attempts. Through proactive training regimens both digitally and in-person, we hope to negate the abilities of attackers and exceed this target metric.

We would like to thank you for your consideration and taking the time to review this letter. We appreciate this opportunity and look forward to improving cybersecurity awareness across the campus. If you have any questions or concerns feel free to contact us at depriestn@hocking.edu or 740-753-6383.
