

## Event Engagement Plan – April 8 Phishing Awareness Event

### 1. Key Talking Points

#### Recognizing phishing

Phishing messages often create urgency to make people act too quickly. If a message tells you to click, log in, or send information right away, pause and verify it first.

#### Why phishing is dangerous

Phishing can lead to stolen passwords, compromised school accounts, and loss of personal information. One careless click can create problems for both the individual and the organization.

#### What to do with a suspicious message

If you receive a suspicious email, text, or QR code, do not click it. Verify it through an official source and report it to IT if needed.

### 2. Conversation Strategy

Our group will approach students and employees in a friendly, low-pressure way so the interaction feels brief and natural. We will greet people at the table or as they pass by and ask a simple question to start the conversation.

A conversation starter could be: **“Do you know the biggest sign of a phishing message?”** or **“Have you ever gotten a suspicious school email or text?”**

After the opening question, we will give one short explanation, connect it to the flyer or pamphlet, and end with one clear takeaway: **pause, verify, and report**. We want interactions to be short but still useful, so our goal is to share one or two practical points instead of overwhelming people with too much information.

### 3. Group Roles

**Conversation starter:** Greets students and employees, starts the interaction, and asks the opening question.

**Information explainer:** Gives a short explanation of phishing awareness and walks people through the main point of the flyer or pamphlet.

**Observer / note taker:** Pays attention to reactions, listens for repeated questions or misconceptions, and records patterns for later analysis.

**Materials support person:** Keeps handouts organized, restocks materials, and helps keep the table running smoothly if multiple people stop at once.

#### **4. Observation Plan**

During the event, our group will pay attention to several things:

- The most common questions people ask
- Common misconceptions, such as thinking phishing only happens through email
- How students and employees respond differently to the materials or conversation
- Which handouts or visual materials get the most attention and seem easiest to understand

These observations will help us evaluate how aware people already are of phishing risks and what areas may need more explanation in future awareness efforts.

#### **Conclusion**

The goal of our event engagement plan is to make phishing awareness practical, simple, and easy to understand. Our group will focus on clear communication, short conversations, and useful observations so that we can both educate users and gather insights about phishing awareness on campus.
